Information Management 1

Project No. 1

Objective

- Will be able to develop simple full stack project
- Will enhance skills using web base application

Scope

1. This project is individual
2. Project will cover midterm activities (ERD, Stored procedure)

Problem statement

Develop a simple application that will serve as student directory. The system will be able to capture student personal record as well as the schedules for subject and room assignment for the semester. System users will have a limited access according to the specific role.

User Roles

1. Admin – full access to the system
2. System user – read only, Can modify for his/her own profile.

Requirements

- Develop the Entity Relationship Diagram(ERD)
- Make a mock up User Interface and flow of your system
- All database related queries must be in stored procedure or view
- Printout everything for final checking
- System must run and 100% functional during submission.

Duration

- On or before midterm.
